

Taiwan Ufology Society Press conference and lecture on the presentation of research results

Honorary Chairman Hsien-Jung Ho

Subject: Two discoveries that openly changed the perception of humanity

1. Dark matter and dark energy are found in the 3-cosmic framework of universe

The biggest problem for scientists today is that the universe is full of invisible things, and the content of visible planets and ordinary matter is estimated to account for only 5%, and the remaining 95% is invisible, including 27% of dark matter and 68% of dark energy. Dark matter still can't be found what it is and has been confusing for a hundred years. In 1998, scientists observed the cosmic microwave background radiation and found that the universe is expanding at an accelerated pace. To explain this phenomenon, scientists have taken the subjunctive term "dark energy", which is the source of this phenomenon, but scientists still know nothing about the properties of dark energy. To solve these two problems above, the most basic "String theory" of physics is cited. The original String theory was based on the idea that the universe has nine dimensions of space, plus one dimension of time, which is collectively called 10-dimensional spacetime. According to the "Anthropic principle", if the three dimensions of human existence are taken as a unit, it can be divided into three units, plus the common time of one dimension, i.e., it becomes the 3-cosmic framework of universe, which can be used to solve these two problems. According to String theory, there are no basic interactive forces of nature except gravity can penetrate all three cosmoses, i.e., between any two cosmoses cannot see each other that means dark matter exist in cosmoses other than ours. The best method for exploring dark matter is to start from Earth, where we live. Based on this structure, it can be estimated from earth science that there is a dark planet in the interior of the earth, which accounts for 14.27% of the earth's mass and has a radius of 3700.375 kilometers, about 1.33 times that of Mars in the Earth's interior but other space than ours. This dark planet can be confirmed by the Chandler wobble.

In recent years, scientists have used the Wilkinson microwave anisotropy probe (WMAP) and the Planck space probe to observe cosmic background radiation from 2003 to 2018 in the 15 years, to form a table of cosmological parameters. Eight observations of cosmic parameters have been published, in which the proportion of dark energy in the cosmic composition is gradually decreasing, which is the same as the data of the gradually increase in the same data of global matter. This phenomenon is in line with the "Big Bang Theory", which suggests that the current dark energy is the residual energy of the universe after the Big Bang. In the past 15 years, the ratio of dark matter density to the composition of other cosmoses has gradually increased by 4.3%, compared to the ratio of ordinary matter density in our cosmos to only 0.5%, with a ratio of 8:1. It shows that other cosmoses are the high-energy-density cosmoses, but ours is the low-energy-density cosmos. According to the data of 2018, the dark energy density of universe accounts for 68.42%, while the total matter density accounts for 31.58%, and the dark energy is 36.84% more than the total matter, so the entire universe is still in a state of high energy, i.e., in the stage of rapid expansion. The high-energy-density cosmoses will expand rapidly, but in our low-energy-density cosmos the expansion rate will be relatively small, however, through the action of gravity, the stars of this cosmos will be pulled by the dark matter of high-energy-density cosmoses and expand synchronously, forming the phenomenon that the stars of our cosmos are expanding at an accelerated pace, which is in line with the information of cosmic parameters

observed by scientists. From these two studies, the problems of dark matter and dark energy can be solved. The 3-cosmic framework of universe is related to the worlds of Aliens, Gods and Buddhas, which exist all around us but cannot be seen.

The results of these studies can prove that the universe has a 3-cosmic framework, and that many people have entered a dark planet in another space in the Earth's interior by flying planes, ships at sea, or through tunnels. They have encountered the tunnel phenomenon, which has been converted through space to reach the dark planet of the alien cosmos. In addition, from the Buddhist scriptures, it is known that the world of Buddhas and gods is formed by the transformation of the divine power of Buddhas and gods. Many near-death patients have experienced a dark tunnel phenomenon in which their souls drift into different worlds of light, appearing to enter other cosmos after a spatial transformation. The 3-cosmic framework of universe is related to the worlds of Aliens, Gods and Buddhas, which exist all around us but cannot be seen.

2. Two great tsunamis occurred in Taiwan, destroying the world's earliest civilization

Atlantis has the world's earliest civilization, the Sun Empire, according to Plato's "Dialogues", 12,000 years ago, Atlantis suffered a great flood and sank in a day and night, and its ruins have not been found by scientists till today. The northern part of Taiwan is the junction of the north-south Luzon volcanic island arc and the east-west Ryukyu volcanic island arc, which contains a large magma reservoir underneath and is still an active volcano area. This region is the site of two events of the most important civilizations that destroyed humanity. In April 2001, the international ocean drilling ship "JOIDES Resolution" at the Ocean Drilling Program (ODP) Site 1202 operated geological drilling in the waters northeast of Taiwan, and the results of the drilling were announced: the 410-meter-deep sand sediments at the station were dated and confirmed that the sand sank about 12,000 years ago, the same date as the Atlantis sinking. At that time, Taiwan was hit by a mega-tsunami with waves hundreds of meters high, destroying the earliest Atlantean Sun Empire civilization in Taiwan.

According to the scientific research results of modern scholars, the large-scale eruption of the Qixingshan volcano in Taipei 6,000 years ago, which lasted for five years, caused a major earthquake and triggered a "great tsunami", leaving behind some evidence from 6,000 years ago: 3 tsunami stones in Jiupeng of Pingtung County and 14 tsunami stones on the north shore of Lanyu Island, a 6,000-year-old layer of sea sand was found in Fanzi Mountain, Gongliao, Qingbai City, with a thickness of up to one meter, and the Chinese Hemudu site was destroyed by a tsunami about 6,000 years ago. Based on these circumstances, it can be found that about 6,000 years ago, the residents of Taiwan suffered a tsunami that destroyed the "Tapenkeng Culture" in Taiwan. Some Taiwanese had to look for a place to live in peace, and migrated to uninhabited islands in the Pacific and Indian Oceans, forming a vast territory of the Austronesian language family. Over the years, the results of many scholars' research on linguistics, archaeology, genetics and culture, as well as the spread of the Paper Mulberry and the Bark Cloth culture and Taiwanese jade, show that the Austronesian language family is in line with the saying "out of Taiwan", that is, "the original homeland of the Austronesian language family is Taiwan".

The two tsunamis mentioned above, which led to the disappearance of the world's earliest civilization in Taiwan and the Taiwanese migrated from Taiwan to form the vast domain of Austronesian language family, are two major historical events in the world. Synthesizing the two major findings that have changed human perceptions, it is based on seven papers published in international academic journals and two important writings.

The seven papers:

1. Reconstruction of the Earth Model and Discovery of the Interior Dark Matter
DOI: <https://doi.org/10.29924/REMDM.DB/Collection0001>
2. Mega-tsunami in Northeastern Taiwan at least 12,000 years ago
DOI: <https://doi.org/10.29924/TsunamiTW.DB/Collection0001>
3. Based on the Space-Time of String Theory Exploring Dark Matter Inside the Earth
<http://newidea.org.tw/pdf/S71.pdf>
4. The 3-Cosmic Framework of the Universe Can Hold Dark Matter and Dark Energy
DOI: <https://doi.org/10.5281/zenodo.10518988>
5. Taiwanese Emigrated About 6,000 Years Ago after the Catastrophes to Form a Vast Domain of Austronesian
DOI: <https://doi.org/10.5281/zenodo.10522464>
6. Dark Matter and Dark Energy can be Held in the 3-Cosmic Framework Through Original String Theory
DOI: <https://doi.org/10.5281/zenodo.13982179>
7. Dark Matter can be Revealed Inside the Earth by String Theory
DOI: <https://doi.org/10.5281/zenodo.13982835>

The two important writings:

1. There is 3-cosmic framework in the Universe — Including Dark Matter and Dark Energy
2. The Motherland of Civilization Is Taiwan
